IF-SRV-PRINT

Installed Printers

1) At log on the master log on script is launched and it spawns the
printer script. The two run in parallel.

2) The printer script enumerates printer installed on the client and
deletes printers that are installed from IF-SRV-FILE01 and NT-FILE.
Any other printers are left installed.

3) Based on printer group membership the script determines which
printer the user should have installed.

4) Any printers not installed will then be installed on the client.
